

TechNova Proposal - Smart Parking System Implementation

1. Introduction

ParkTech Global is honored to submit this proposal for the Smart Parking System Implementation (RFP SPS-2025-001). As a European-based technology provider with extensive experience across municipal parking systems, we offer a mature and feature-rich platform currently deployed in 12 major cities across Europe. While we acknowledge some localization needs, our solution can be rapidly customized to meet the requirements of Riyadh Municipality.

2. Executive Summary

Objective: Provide a proven, enterprise-grade smart parking platform adapted for the local Saudi market.

Approach: Utilize our off-the-shelf SaaS solution, adapt Arabic language and local payment integrations, and partner with a Saudi firm for compliance and support.

Benefits:

- Proven Scalability: Deployed in cities with >500,000 vehicles.
- Global Reliability: SOC2 and ISO-certified infrastructure with multilingual support.
- Strong Analytics: Built-in predictive analytics and occupancy trend forecasting.

Risk Note: Hosting is currently EU-based; a KSA migration plan is proposed for post-award implementation.

Compliance: Partial (GDPR, ISO 27001). Requires data residency exception or migration agreement.

3. Company Profile

Name: ParkTech Global GmbH

Headquarters: Munich, Germany

Founded: 2011

Employees: 220 (60+ engineers)

Notable Deployments:

- Vienna Smart Parking Grid
- Amsterdam Predictive Traffic & Parking AI
- Berlin Mobility-as-a-Service Integration

Certifications: ISO 27001, GDPR, SOC2 Type II

TechNova Proposal - Smart Parking System Implementation

4. Understanding of the RFP

We understand that Riyadh Municipality seeks a reliable and compliant partner to:

1. Improve downtown traffic and user satisfaction through parking availability data.
2. Ensure data is securely processed and hosted in compliance with local laws.
3. Deliver a seamless mobile and web experience with Arabic language support.
4. Provide monthly reporting, APIs, and 99.5% system uptime.

We believe our platform exceeds most technical expectations, but we flag the need for a Saudi data residency plan as a critical consideration.

5. Scope of Work

In-Scope:

- Integration of 200 pre-certified smart sensors (EU origin)
- Native Mobile Apps (iOS/Android) with planned Arabic UI extension
- Cloud-based Admin Dashboard with predictive analytics
- Integration with Stripe, PayPal (SADAD to be added post-contract)
- Comprehensive REST API and webhooks
- SLA Monitoring and Predictive Load Alerts
- Custom Reports & Monthly Usage Analytics
- Training, Documentation, and 24/7 Global Support

Out-of-Scope:

- Initial hosting in Saudi Arabia (offered as future enhancement)
- Arabic language support at launch (delivered in phase 2)
- Local partner contracting (handled through affiliate)
- Custom-built hardware (standard sensors only)
